

HCI concepts,
Usability goal &
User Experience.

HCI concepts for Interface Analysis:

1) Visibility:

Important information & actions should be easy to notice.

2) Visual hierarchy:

Size, position, contrast & spacing communicate how important something is.

This helps users to understand what to look first.

3) Information organization:

Group related content logically so users can understand the page structure & predict where information belongs.

Simplicity:

Remove unnecessary complexity.

A Focused Interface is easier to understand & scan.

Consistency:

Similar items should look & behave similarly so users do not have to relearn patterns.

Readability:

Appropriate font size, spacing, contrast & line length help users read & scan content.

Cognitive Load:

Too many choices, links, colors, icons or competing sections increase mental effort & can cause confusion or overwhelm.

Usability vs User experience.

Usability: Focuses on how effectively, efficiently & easily users can accomplish tasks with a system.

User Experience (UX): It is a broader experience. Perceptions, emotions, satisfactions, trust, enjoyment etc.

Usability is part of User experience (UX).
UX is a broader term

Usability goals:

1) Effectiveness:

Can users **successfully** accomplish attended task.

2) Efficiency:

~~Can~~ How much **time & effort** does **completing the task** take.

- Efficiency requires a task to be effective/complete first.

- Many apps are effective but not efficient.

3) Learnability:

How easily can a new user understand the interface & begin using it?

4) Memorability:

After not using the system for some time, can the user remember how to use it

User Experience goals:

1) Satisfaction:

Does the user feel clear & pleasant

2) Enjoyment

Does interacting with product feel engaging & enjoyable.

3) Trust:

Does the user feel confident in system & its information.

4) Engagement:

Does the interface encourage appropriate attention & continued use.

5) Emotional Response:

Does the user experience, delight, frustration, confidence, anger etc.
